## MOUAWAD CONSULTING GEARS UP WITH NEW SERVICES AND INCREASED CAPACITY

Our China Office is now doubling commissioning and survey capacity with new colleagues and we are now fully suited for retrofit of scrubbers

Hamar, Norway & Shanghai, China, September 17, 2018– Mouawad Consulting, the leading provider of consultancy and engineering services related to Ballast Water Management onboard ships, recently increased on-site survey and commissioning capacity in China to accommodate the increase in demands for our services in the area. This comes shortly after we opened a new office in the city of Busan, Korea.

The company also expanded its services to include turnkey solutions for retrofit of scrubbers. This comes after increasing demands for those services from existing clients, which led us to team with leading engineers in the field to deliver onboard surveys and scanning, detailed engineering, commissioning and installation services.

*“The decision to expand our services to include scrubber retrofits complements naturally our current capabilities” said Jad Mouawad, CEO. “Similar to BWMS retrofits, we are able to deliver the most cost-effective quality product when it comes to retrofits, thanks to huge investments into digitalization of our processes and streamlining our deliverables.”*

Increased engineering capacity for retrofit will allow the company to deliver more retrofit projects for both BWMS and scrubbers.
