## MOUAWAD CONSULTING SIGNS AGREEMENTS WITH SCORPIO AND DIAMOND S

Commissioning, re-commissioning and training of crew for onboard operation of already  
installed BWMS on sailing and new built ships

Hamar, Norway, September 5, 2017– Mouawad Consulting AS, the leading provider of consultancy and engineering services related to Ballast Water Management onboard ships, recently signed several agreements for consultancy, commissioning on new built ships, re-commissioning of BWMS installed onboard ships and training, with several major ship owners.

Scorpio Ship Management operates a large number of ships fitted with BWMS, and Diamond S Management operates ships with BWMS that are operational. Our contribution is related to getting those systems up and running, training of the crew and assisting both companies navigating the waters of the Ballast Water Management Convention.

In addition to the headquarters in Hamar, Norway, Mouawad Consulting has offices in Shanghai and Beirut, Lebanon. The office in Beirut, named Engineering Center of Excellence, will strengthen our engineering and scanning capabilities as the demand for our services is increasing drastically.

*“We are proud to be chosen by such respected companies to assist them in getting their installed BWMS up and running. We have experienced a rush from other major ships owners as well who did not wish to be identified and we are meeting the increase in demand for our services by opening stations in different parts of the world”*
